AtliQ Café

August Revenue 2026 (₹ crore)

My answer	4.83
Finance team answer	4.71

₹ 12 Lakh apart

Today's question

Before you touch the query, where do you look first?

Bonus question

The orders table holds 1,69,400 rows for August. What might be in there that is not revenue?

My Answer

“ First the definition of the metric. Then the filter (inclusion & exclusion). ”

Step 1 : Ask what revenue means

Revenue before discounts or after discounts? 8:50

Revenue before Tax or after Tax? 8:50

Revenue Order status? Completed? Cancelled? Failed? 8:50

I cannot assume things.
I ask first for clarity.

Step 2 : Check the order status column

order_id	amount ₹	order_status
AC-220826	200	completed
AC-220827	310	completed
AC-220828	100	cancelled
AC-220829	400	completed

Example : order_id AC-220828 cancelled

₹75 refunded, it is not revenue | **₹25 kept as revenue**

“ Select-all also counts the money that was refunded. ”

DAY 15 / 30

Bonus Answer

“ 1,69,400 rows is not 1,69,400 completed orders ”

AtliQ Café
Order no:
AC-220826
₹ 200
Status: Completed
RECOGNISED

Revenue

AtliQ Café
Order no:
AC-220828
₹ 100
Status: Cancelled
PARTIAL REFUND

75% refunded, not revenue

25% counted as revenue

AtliQ Café
Order no:
AC-220826
₹ 200
Status: Completed
DUPLICATE ENTRY

Not counted twice

AtliQ Café
Order no:
AC-220829
₹ 400
Status: Completed
RECOGNISED

Revenue

1,69,400 rows - **4,100 cancelled and refunded** = **1,65,300 completed**

Day 15 lesson

Before you aggregate the column, verify the filters
