AtliQ Café

Result Grid | Filter Rows: | Edit: | Export/Import: | Wrap Cell Conte

order_id	store_id	order_date	store_name	amount
AC-220826	S09	2026-09-18	Borivali	300
AC-220827	S09	2026-09-18	Borivali	235
AC-220819	S07	2026-09-18	Dadar	215
AC-220820	S07	2026-09-18	Dadar	345
AC-220821	S07	2026-09-18	Dadar	190
AC-220807	S03	2026-09-18	Lower Parel	420
AC-220808	S03	2026-09-18	Lower Parel	260

Context

- ✓ Dadar traded in the September month
- ✓ ₹ 9.8 Lakh in the orders table

Today's question

Your query joins orders to stores to cities. Why did Dadar vanish?

Bonus question

Name the one check that would have made this loud instead of silent.

My Answer

“ INNER JOIN is not an error. The row just disappears ”

Step 1 : Trace Dadar through the tables

Result Grid | Filter Rows:

order_id	store_id
AC-220801	S01
AC-220802	S01
AC-220803	S01
AC-220804	S02
AC-220805	S02
AC-220806	S02
AC-220807	S03

Result Grid | Filter Rows: | Edit:

store_id	city_id	city_name
S01	C1	Mumbai
S02	C1	Mumbai
S03	C1	Mumbai
S04	C1	Mumbai
S05	C1	Mumbai
S06	C1	Mumbai

Result Grid | Filter Rows:

store_id	store_name
S01	Vashi
S02	Bandra
S03	Lower Parel
S04	Andheri East
S05	Powai
S06	Thane
S07	Dadar

Dadar (S07) has no row in cities.

No match, so INNER JOIN drops it.

Step 2 : Keep every order with LEFT JOIN

Result Grid | Filter Rows: | Export:

store_id	store_name	city_name
S01	Vashi	Mumbai
S02	Bandra	Mumbai
S03	Lower Parel	Mumbai
S04	Andheri East	Mumbai
S05	Powai	Mumbai
S06	Thane	Mumbai
S08	Malad	Mumbai

INNER JOIN

Dadar is missing

Result Grid | Filter Rows: | Export:

store_id	store_name	city_name
S01	Vashi	Mumbai
S02	Bandra	Mumbai
S03	Lower Parel	Mumbai
S04	Andheri East	Mumbai
S05	Powai	Mumbai
S06	Thane	Mumbai
S07	Dadar	NULL

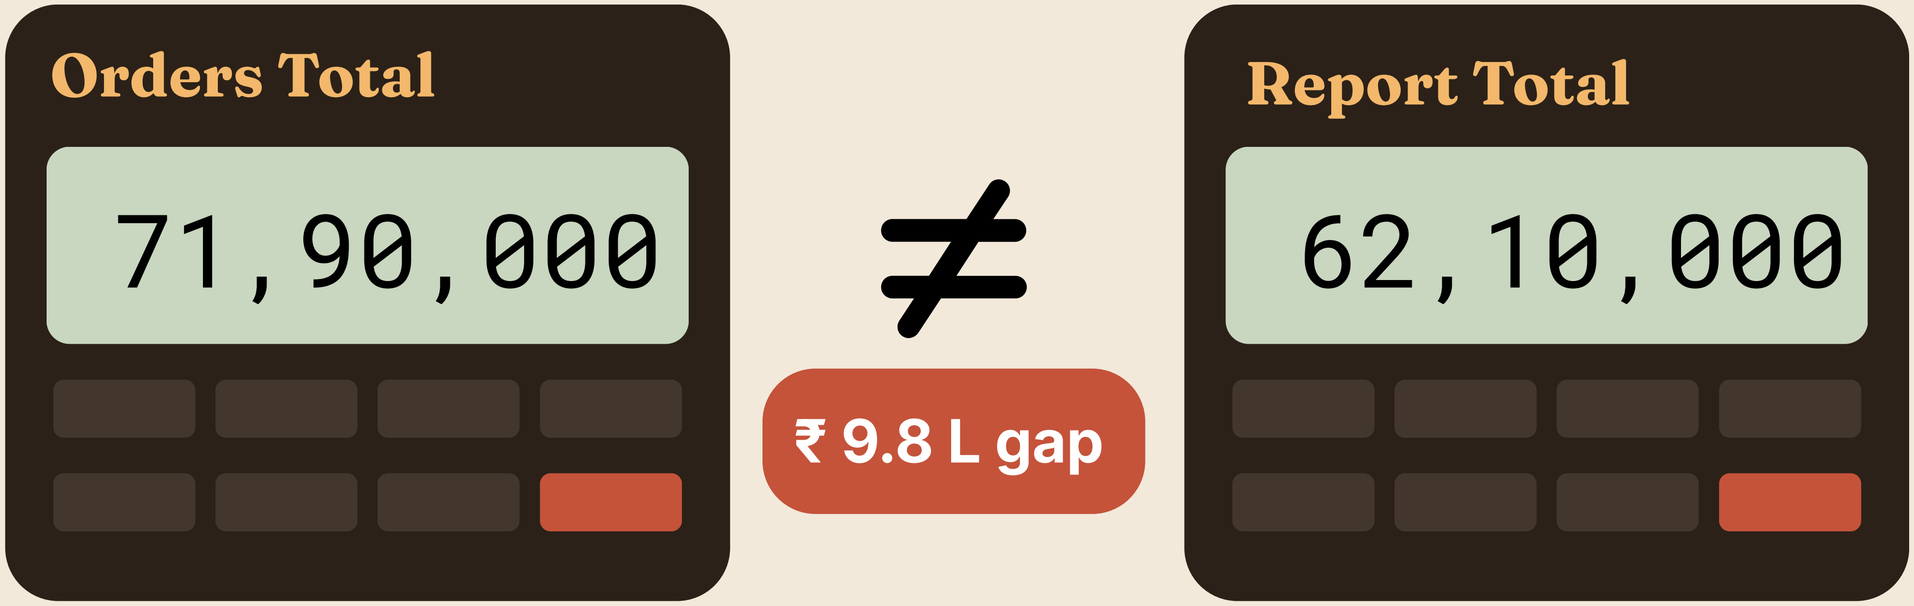

LEFT JOIN

Dadar shows up

“ INNER JOIN drops it. LEFT JOIN shows it. ”

Bonus Answer

“ Compare the totals. A gap means rows were lost. ”

Orders table **Mumbai report**

₹ 9.8 Lakh is the revenue of Dadar.
A JOIN never warns you when it drops rows

Day 17 lesson

After every join, prove no rows were lost
