

September revenue by category

Before		After
₹ 3.19 cr	JOIN →	₹ 10.2 cr

Same orders. Three times revenue

Today's question

Why did the total go up?

Bonus question

You still owe Kavya revenue by category. What do you actually sum?

AtliQ Café

My Answer

“ The join copied the bill. SUM added every copy. ”

Before the JOIN

order_id	order_value
AC-220826	600

orders_table

1 order

1 row

After the JOIN

order_id	product	order_value
AC-220826	Croissants	600
AC-220826	Hot Chocolate	600
AC-220826	Wraps	600

Same bill, 3 rows

₹ 600 + ₹ 600 + ₹ 600 = ₹ 1800

The real bill is ₹ 600

“ One bill. Three rows. Counted three times. ”

AtliQ Café

DAY 18 / 30

Bonus Answer

“ Sum what belongs to the item, not the order. ”

Two columns. Only one is safe to add

product	Category	order_value	item_price
Croissants	Bakery	600	180
Hot Chocolate	Beverages	600	200
Wraps	Savoury	600	220
SUM		1800	600
		Invalid bill	**Valid bill**

The fix

SUM(item_price)
GROUP BY category

Day 18 lesson

Before you sum a column, know what one row represents.
