AtliQ Café

Today’s question

Before you calculate anything, what do you need to find out?

Bonus question

Both encodings can be correct here. How would that happen?

September month discount table

order_id	discount_amount
AC-220830	0
AC-220831	
AC-220832	40
AC-220833	
AC-220834	0
AC-220835	
AC-220836	25

112,800 rows

65,800 have a value | 47,000 blank

Vishnu Ram Sachin | Data Analyst

My Answer

“ Zero is the data. Blank is the question ”

0

It is a real value

The customer purchased. There was no discount to claim

Include in the average

Blank is unknown

The discount is missing. It could be a data load issue or it was not recorded.

Decide with the team

1
Ask Kavya and the data owner what a blank means

→

2
Wait until confirmed

→

3
Include or exclude the blank rows

Don’t fill the gap. Find out why it’s there.

AttiQ Café

DAY 19 / 30

Bonus Answer

“ Blank and 0 can both be right. ”

In-store POS

writes 0 if no promo applied

0 = no discount

Delivery app feed

leaves it blank if no promo

= no discount

discount_amount
0

Same fact, two encodings

No discount was given. In this case, blank means zero.

Day 19 lesson

A blank is not a value. Find out what it stands for before you average it.
