

South - 20 Outlets

West - 13 Outlets

North - 7 Outlets

Today's question

" Name the different numbers it could mean, and say which one you would send. "

Bonus question

One of them makes South win.
Another makes West win.
Which is which?

AtliQ Café

My Answer

“ Top Performer ” isn't a single metric .
It could mean several different numbers.

Revenue

- Total Revenue
- Average Revenue Per Store (ARPS)

Quantity

- Total Quantity sold
- Average Quantity sold Per Store (AQPS)

Growth %

- Month over Month change %(MoM chg pct)

Not usable for this challenge because insufficient data

But there is no single correct metric , because each metric focuses on different vision and outcomes

AttiQ Café

Bonus Answer

“ Same data , Two different winners”

South - outlets win by TOTALS

- **Total Revenue (TR)**
- **Total Quantity sold (TQ)**

West - outlets win by AVERAGES

- **Average Revenue Per Store (ARPS)**
- **Average Quantity sold Per Store (AQPS)**

Day 2 lesson

An ambiguous question has many correct answers

choose deliberately
