

at my desk , minutes later

Not missing data. Just do not know which of at least three questions she just asked.

Today's question

Break "are our discounts working?" into the separate questions hiding inside it. How many can you find?

Bonus question

Bonus: two of them need completely different tables. Which tables?

AttiQ Café

My Answer

“ One discount . At least three separate reports ”

Sales volume

Did we sell more units during the discounted period ?

Footfall

Did more unique customers walk in, above usual weekend ?

Basket size

Did each visit bring in more per order ?

Profit

After the discount did margin survive it all ?

A “ Yes ” to one of these can sit right next to a “ No ” on another , more units sold doesn’t guarantee more profit kept

AtliQ Café

Bonus Answer

“ Volume lives in one table. Profit needs a second one ”

Sales volume | Footfall | Basket size

fact_transactions

date, order_id, price, quantity

dim_products

product_id, product_name, category,

Profit

fact_transactions

revenue per line item

dim_products

cost per unit - cup, lid , stick

Day 5 lesson

Ambiguity doesn't hide in the data. It hides in the sentence
