

Context

You are about to send it when Ganesh, the senior analyst, glances at your screen and says one word. "Yelahanka?" You check. Yelahanka opened on 1 August. It traded 22 days, not 31.

Today’s question

How do you fix the ranking so Yelahanka is judged fairly?

Bonus question

name one other thing that can make two stores un-comparable on a plain total.

AtliQ Café

My Answer

“ Rank on daily average, not by total ”

Step 1:

Store total

August sales per store

÷

Step 2:

Days traded

Koramangala 31
Yelahanka 22

=

Step 3:

Average daily sales

per store

“ Total shows the size. Daily average shows the performance ”

Bonus Answer

“ Store size changes what a total means ”

Two outlets, same total?

Large outlet

Small outlet

Store size (sq ft)

A bigger outlet has more space to sell.

The calculation

$$\text{Sales per sq ft} = \frac{\text{Store total}}{\text{Store area}}$$

Day 9 lesson

A total is fair only when every store had the same chance
